

Aetherlink Global Sdn Bhd

Engineering Connectivity. Delivering Reliability.

Telecommunications and infrastructure solutions for mission-critical operations.

Who We Are

Aetherlink Global delivers connectivity and infrastructure solutions for mission-critical operations.

Satellite Communications

VSAT, Starlink, and hybrid systems

IT Infrastructure

Network design and deployment

Field Execution

End-to-end project delivery

The Reality in the Field

The Root Problem

In critical environments, systems do not fail because of a lack of technology. They fail because **execution does not match real operating conditions.**

The Consequences

- Connectivity becomes unreliable under harsh conditions
- Integration breaks down across systems and teams
- Operations are disrupted — with real cost and safety implications

What We Do

We design, deploy, and deliver connectivity and infrastructure solutions engineered for real environments — not ideal ones. From initial consultancy through to full commissioning, We ensure systems are deployed, tested, and operational from day one.

Every engagement is execution-focused — we stay accountable from the first blueprint to the final handover.

Core Services

Satellite Communications

VSAT, Starlink, and hybrid solutions tailored for remote and offshore connectivity requirements.

Telecom Engineering

Specialist engineering solutions for complex telecommunications challenges in critical settings.

Project Delivery

Structured implementation with accountability at every milestone, from planning to commissioning.

IT & Network Infrastructure

End-to-end design and deployment of robust network systems for industrial environments.

Consultancy & Advisory

Technical guidance from assessment through to system design, ensuring the right solution for each site.

Maintenance & Field Support

Ongoing technical support to keep systems performing reliably after deployment.

Where We Operate

Oil & Gas

Offshore platforms and onshore production facilities demanding always-on connectivity.

Energy & Utilities

Power generation, transmission, and utility infrastructure in geographically challenging locations.

Aviation & Aerospace

Airport operations, aerospace facilities, and airside infrastructure requiring high-reliability networks.

Remote & Industrial Sites

Mining, construction, and industrial operations where standard connectivity simply does not reach.

Our Approach

Practical. Execution-Focused.
Accountable.

We do not just design systems on paper. Every solution is engineered to perform under the specific conditions of each deployment — whether offshore, remote, or in a high-demand industrial environment.

Plan

Site assessment aligned to real operational requirements

Deploy

Installation executed to field-ready standards

Validate

Systems verified under actual operating conditions

Mohd Arif Hakimi Mohd Radhi

Director | Strategy & Business Development

An Engineering Technologist registered with the Board of Engineers Malaysia (BEM) with experience across aviation engineering, aerospace operations, and industrial project management.

Specializes in aircraft teardown, asset recovery, and aviation operations, with hands-on experience managing projects within airport environments and regulated operational settings.

Strong background in project management, technical sales, and tender execution, supporting business development, partnerships, and commercial growth initiatives.

Bachelor in Aircraft Engineering Technology (Mechanical),
Universiti Kuala Lumpur – Malaysian Institute of Aviation Technology (UniKL MIAT)

“Driving growth through engineering capability and commercial execution.”

Khairul Fazly Hamidon

Director | Technical & Operations
MBA – Universiti Tun Abdul Razak (UNITAR)

A telecommunications professional with over **17 years of experience** in **VSAT, satellite communications, LTE, and mission-critical infrastructure** within the Oil and Gas and industrial sectors.

Proven track record in **end-to-end project delivery**, offshore deployments, and managing complex operations with consistent **>98% SLA performance**.

Experienced in **RFO, RFI, ITB processes**, vendor and stakeholder management, and leading multi-disciplinary engineering teams.

Project exposure includes major clients such as **PETRONAS, Shell, and Total Energies**, delivering reliable connectivity across offshore platforms and remote environments.

“Execution focused, ensuring systems perform reliably where it matters most.”

Combined Strength

Aetherlink Global is built on two complementary pillars that together enable both **reliable delivery** and **scalable growth**.

Deep Technical Execution

17+ years of field-proven experience deploying connectivity in the most demanding environments — offshore, remote, and critical infrastructure.

Strategic Commercial Direction

Strong capability in tender management, business development, and partnerships — positioning Aetherlink for sustainable, long-term growth.

Together, these strengths make Aetherlink Global a partner you can trust — from the boardroom to the field.

Business Model

A structured, two-phase approach designed to scale with performance — balancing lean execution today with aggressive growth tomorrow.

Phase 1 — Lean Foundation

Controlled cost structure, subcontracting partnerships, and disciplined project execution to establish credibility and cash flow.

- Lean operational overhead
- Subcontractor-led delivery
- Focus on quality and margin

Phase 2 — Scale & Growth

Direct contracts, expanded capabilities, and regional presence. Revenue growth driven by performance track record.

- Direct client contracting
- Expanded workforce and capacity
- Multi-sector revenue streams

Why Aetherlink

We don't just advise. We deliver.

Industry Practitioners

Founded and led by engineers with hands-on experience across telecoms, aviation, and critical infrastructure projects.

Field & Offshore Experience

Deep exposure to complex, high-stakes environments — from remote deployments to mission-critical network buildouts.

Cross-Industry Capability

Proven across telecom and aviation sectors, with the agility to serve adjacent critical infrastructure markets.

Execution-Focused

We measure success by delivery outcomes — on time, on spec, and on budget. Advisory alone is never enough.

OUR VISION

Trusted. Connected. Reliable.

To become the region's most trusted provider of connectivity and engineering solutions — delivering measurable impact across telecom, aviation, and critical infrastructure industries.

We are building not just a company, but a long-term partner that industries can rely on when it matters most.

Engineering Connectivity. Delivering Reliability.

Aetherlink Global Sdn Bhd

Kuala Lumpur, Malaysia

We are ready to partner,
execute, and grow alongside
the region's most critical
industries.

Built for execution. Ready to
scale.

Get in Touch

Whether you are seeking a
delivery partner, a technical
consultant, or a long-term
solutions provider — Aetherlink is
built for the challenge.
